Dear customers,

you have just opened a new YATE catalogue 2019. It will offer you the products of four brands - YATE, HIGHLANDER, TREKMATES and MUND. Each brand brings its own philosophy and history.

YATE products form the base and take up the biggest part of our offer. You know our company thanks to a wide range of outdoor equipment we have been developing and producing for more than 27 years. Primarily, it is the camping mats which most of our customers associate with our brand, but nowadays, our catalogue offer includes products for tourism, camping and climbing. Our outdoor equipment is accompanied with items for fitness and water sports. Last but not least, we are proud to be the top-class brand in archery targets which you will find in a separate catalogue.

HIGHLANDER belongs to the traditional Scottish family companies. Being established in the market since 1985, this brand often finds its inspiration in the military outdoor equipment. This brand puts emphasis on high quality of material processing, functionality and endurance. In 2014, HIGHLANDER received the award for the best small to medium Scottish family business. Another proof of the quality is the fact that HIGHLANDER was an official merchandise supplier for the London 2012 Olympics and for the Glasgow 2014 Commonwealth Games.

The company TREKMATES was founded in a garage in the English town of Nottingham in 1997. Since then, the company has gone a long way. Their production started with gloves and hats, but, gradually their product range was growing and focusing on the outdoor accessories. In our catalogue, TREKMATES is represented mainly by sleeping bag liners and popular ponchos.

MUND is a Spanish company specialized in socks production. This unique specialisation, the latest technologies and almost one hundred-year long experience make MUND the top-class brand in socks production. MUND factory is situated in the town of Pradoluengo in Sierra de la Demanda mountains whose spirit has inspired the development and got imprinted into DNA of all products.

The products marked YATE TOP stand out among the others due to their extra-ordinary properties, quality or are exceptional in any other way. In their product range category they occupy the top positions. However, it does not always mean the longest life-span or other superlative property but the way it is used gives the owner some added value e.g. it is easier to handle, saves space or offers higher protection.

# EXPLANATION OF PICTOGRAMS

A product recommended for cyclotourism. Small volume and low weight when bundled up.

A product recommended for tourism. Its quality meets the requirements for a few days long trips.

A product recommended for camping.

A product recommended for hiking and climbing. Tested in alpine environment. It offers an extra-ordinary quality of material and lower weight. Also suitable for tourism.

A product recommended for exercising.

A waterproof product.

Possibility to join 2 sleeping bags together.

**R - THERMAL RESISTANCE** is a physical value describing thermal-insulating properties of material. It is directly proportional to the thickness of material and inversely proportional to its thermal conductance  $\lambda$ . With the maximum value of thermal resistance R the thickness of material is also maximal and its thermal conductance is minimal. Thermal resistance R describes the resistance of  $1\text{m}^2$  of material against the flow of heat energy when the temperature difference is  $1\text{K}$ . Thermal conductance  $\lambda$  describes the conductive property of material. It is the amount of energy (in Watts) that flows through one-meter thick layer of material when the temperature difference between the outer and inner surfaces is  $1\text{K}$ .  
Explanatory note:  $R = d / \lambda$  ( $\text{m}^2\cdot\text{K}\cdot\text{W}^{-1}$ ) • d - thickness of material •  $\lambda$  - coefficient thermal conductance ( $\text{W}\cdot\text{m}^{-1}\cdot\text{K}^{-1}$ )

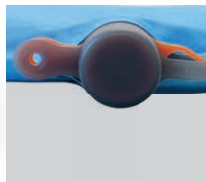

## VALVE PUSH IN

Made from high quality plastic (ABS). Comfortable and easy inflating, easy to control (no screwing).

## REVERSE VALVE

A unique user-friendly valve without screwing. It contains a reverse membrane to prevent air leakage while inflating. By turning the valve the membrane prevents the air from returning back while deflating. The upper cap perfectly seals the valve and helps it stay clean. The bigger diameter makes for 50% faster inflating or deflating.

## MB - ANTI - SLIP SURFACE „YATE MICRO BRUSHED“

As it happens you never find a perfectly flat place for sleeping. It means that lying in a sleeping bag you will slip down even from a comfortable camping mat. That is why we have developed a special surface - Yate Micro Brushed - which increases the friction and prevents the sleeping bag from slipping down. It is used with most of our models.

## YATE STRETCH

Our holiday mat is like your bed. The most comfortable models TREKKER STRETCH and CAMPING use the stretch surface that offers the same comfort like a high quality mattress. Your spine remains straight even when the mat is inflated at its maximum.

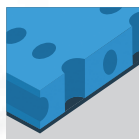

## WARM ZONE

The lightweight core models with the horizontal and vertical canals may have limited insulation properties. Some models use WARM ZONE (with the horizontal canals only) which improves the insulation properties in the most sensitive area between the shoulder blades and waist.

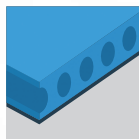

During packing fold in a half.

# FOAM INSIDE THE SELF-INFLATING MATS

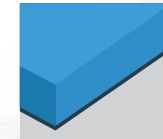

## HORIZONTAL + VERTICAL CANALS

Models with the lowest possible weight of core. Usually combined with WARM ZONE.

## HORIZONTAL CANALS

The lightweight core preserves the best possible insulation properties. The canals substantially reduce the weight and only minimally influence the insulation properties.

## SOLID CORE

The solid core mats with the lowest thermal conductance reach the best insulation properties.

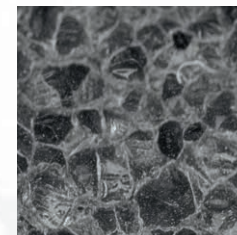

The solid core allows for easy self-inflating and provides a long life-span.

# TYPES OF POLYETHYLENE FOAM

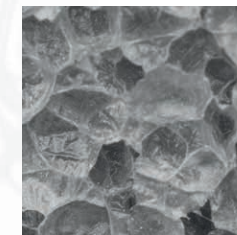

## EVA FOAM

## CROSSLINKED FOAM

## NON CROSSLINKED FOAM

Thermal resistance – certificated by: VÝZKUMNÝ ÚSTAV POZEMNÍCH STAVEB – CERTIFIKAČNÍ SPOLEČNOST, PRAGUE - Based on the latest measurements and calculations, some values of thermal resistance have been changed.

## POCKET FOR REPAIR KIT

Self-inflating mats are supplied with the packsack and repair kit. Pocket for repair kit is inside the packsack to avoid its lost or damage. (Item CALIMAN and LECTUS doesn't include repair kit).

## THE COLOUR OF THE MAT IS MARKED ON THE PACKAGE.

# CAMPING MATS

## ALPIN

SC00138

VALVE REVERSE

A model utilises the latest materials to reach the lowest weight and volume when packed. By combining the new surface and core materials the weight has been reduced to mere 620g! At the same time the mat retains the maximum comfort and excellent insulation properties. REVERSE valve allows for faster inflating or deflating. ALPIN is designed for hiking and climbing, and it should be used in a tent or in places where its surface will not get easily damaged.

## GLACIER AIR MAT

SC00137

VALVE REVERSE

TESTED  
Svět  
outdooru

GLACIER AIR MAT is a comfortable inflatable mattress with transverse tubes and PRIMALOFT insulation. Thanks to its design, the mattress offers better comfort and insulation properties than other models in the same category. It is equipped with REVERSE valve which allows for faster inflating or deflating. Thanks to its low weight and compactness the mattress is the best choice for hiking and climbing.

	GLACIER AIR MAT
CATALOG NO.	SC00137
TYPE	inflating
MATERIAL	polyester 75D
COLOUR	blue/grey

## EVAZOTE – you can't replace the original!

EVA material is produced under high pressure which results in homogenous and closed-cell structure. Thanks to it, this material has excellent mechanical properties – abrasion resistance, constant shape and does not absorb water. The mats are light, durable and almost indestructible. The ones produced in the 1990s still do good service to their owners despite many scratches. Their excellent properties are the reason why they are frequently used by expeditions for hiking and climbing in the highest mountains.

### 10 reasons why the EVA COMPACT is ideal for demanding conditions

1. Endurance.
2. Low weight.
3. Small volume.\*
4. High isolation ability.
5. Comfort.
6. Easy to unpack.
7. Multifunctional packing.\*
8. Resistance to wetness and dirt.
9. Easy to fix to the backpack.\*
10. Utility qualities.

\* Applies to item EVA COMPACT

## EVA COMPACT 50

SC00145

When we were developing the new EVA COMPACT mat, we aimed to produce a user-friendly mat offering maximum comfort and insulation, and to minimize the risk of damage. The heavy-duty EVA material is resilient and water-proof with excellent insulation properties. The wave structure of the material makes for comfort, low weight and easy packing. The double-purpose package protects the mat from humidity and dirt, and at the same time serves as an inflatable pillow. Wherever you go with EVA COMPACT mat, you are bound to sleep comfortably.

	EVA COMPACT 50
CATALOG NO.	SC00145

# SINGLE AND DOUBLE LAYER MATS

These mats are produced from polyethylene foam in a wide range of dimensions and colours. Depending on the production process the foam is produced as cross-linked and non-crosslinked polyethylene. It is almost impossible to tell these two forms of material apart with naked eye, however the difference in quality is huge. The structure of non-crosslinked form has open cells, it means the cells do not have the same size and the cells' walls can be very thin, weak or can be missing. Consequently, the mechanical properties and durability are worse than those of the cross-linked form. Also, the non-crosslinked material slightly soaks in water.

# SLEEPING BAGS

## SLEEPING BAGS

### INSULATION FILLINGS

**EULIN FIBER** – extra-thin insulating fibre whose shape and properties resembles real goose down. This low-weight fibre does not absorb moisture and has excellent insulation qualities. For reaching the same insulation properties, you need a thinner layer of EULIN FIBER, and that is why the sleeping bags are lighter and smaller.

**HOLLOW FIBER** – a standard low-weight filling of sleeping bags with very good insulation properties. It does not absorb moisture and dries up easily.

**1**

Tabs for hanging to enable drying and storage.

**3**

Velcro safety catch to prevent the zip from spontaneous opening.

**5**

Headcollar with elasticated draw cord.

**2**

2 way zip to make a couple and for better comfort.

**4**

Inner windcollar with elasticated draw cord.

**6**

Wind baffle protects the zip area against wind and cold.
